

C-VS-1800-SAV (EQUIPMENT CONSOLE)

A 19" inch high console will be mounted to engine cover of the Chevy van and will angle 55 degrees to floor. It will allow 18" inches of space for control heads and accessories. The top of console will have a platform 8.5" x 13.5" minimum. All power distribution components such as fuses, circuit breakers etc... will be mounted inside the console on a power shelf. The main housing will be attached to engine cover and floor with six (6) bolts and threaded plates. This will allow the entire console and equipment to be easily removed in order to perform service on the engine or console. Note: All wiring harnesses will remain intact when console is removed for service. The console assembly will include up to four (4) equipment face plates, four (4) filler panels, mount brackets and hardware. The main housing will be fabricated from 14 gauge steel. Mount brackets will be 11 gauge steel and equipment mount rails will be black anodized extruded aluminum. All steel parts will have a textured black polyester powder coat finish.
